Wall finish system

ROOS INTERNATIONAL

The Texturglas Architectural Wall Finish System is an environmentally-friendly collection of textured designer wall finishes. Features include mold and mildew control and the ability to cover up problem surfaces. The textures are designed to strengthen, stabilize and protect walls with its woven design process that turns glass textile yarns into textures that don't trap moisture when finished with a latex paint. The material is reusable, recyclable and emits no VOCs. Texturglas can be customized with patterns and logos and finished with any type of paint finish or color. Acoustical backing is available on select textures.
