Antimicrobial  
glass fiber  
wallcovering

The solution that improves the sanitary environment

## Keeping a good sanitary environment, a priority for public buildings and high risk rooms

**Mold and bacteria quickly develop** under the influence of heat, of humidity and of some nutrients. They are mainly found in **kitchens, bathrooms and wet rooms** in private and public buildings and high humidity climates.

Mold and bacteria presence can cause **irritation, asthma and several infectious diseases**. These symptoms are increased for **those with particular sensitivities** (babies, children, the old or the sick).

In low ventilated areas, they can **destroy materials** and cause the **need for disinfection in hospitals**.

**How to stop and prevent mould and bacteria development?**

## Mold X provides the solution with a high-performance product

### No development of bacteria and mold on the surface

- Immediate effect
- Lasting effect, even after several layers of paint

NO BACTERIA

NO MOLD

### A decorative, wearing wallcovering as are all products in the Novelio® Collection

- Reinforces delicate surfaces
- Resists abrasion and impact
- Covers all cracks

# MOLD-X

## Mold-X principle

### How does it work?

Mold-X wall covering is coated with a **special anti-bacterial and anti-fungal formulation**.

The active ingredient **breaks the chain** of bacteria and mold development.

Mold-X **acts even after several layers of paint** have been applied: the paint is porous and lets the active ingredient work.

The active ingredient does not present **any Health risks** Mold-X is certified Oekotex Class 1 (non harmful substance).

## Mold-X efficiency

The efficiency of the active ingredient has been tested in the laboratory and in normal conditions the **product performance has been confirmed** each time <sup>(1)</sup>.

For maximum protection use in conjunction with a special anti fungal or anti bacterial paint (hospitals).

### Mold-X functioning

#### Anti-bacterial and anti-fungal efficiency
